

GS1 Microsoft Word Templates Introduction

These instructions are to help your MO localise, install and use the GS1 Microsoft Word Templates. Because every MO has different internal technology systems and protocols, the precise processes for installing and distributing the templates will vary. Generally speaking, the document templates should be localised with your MO's logo and official contact information prior to being distributed to all employees for use.

The following steps are included in these instructions. Prior to starting, make sure you have downloaded the latest logo files for your MO from the global brand section of the MO Zone, including the logo file "GS1_[Country]_PPT_And_Word_2014-12-17.png."

- 1 Setting your Macro Security Levels** *(Templates may be used without macros)*
- 2 Localising the Templates for Your MO** *(Should be done prior to internal distribution)*
- 3 Installing the Templates** *(Will vary based on your organisation's IT system)*
- 4 Using the Templates**

There are two optional set-up templates and three document templates. The set-up templates are provided to make it easier to localise and use the document templates. It is optional to use them.

Set-Up Templates (Optional)

GS1 MSWord Localisation.dotm	Localisation Template This template runs a program that automatically inserts your MO's logo into each of the document templates and your local contact information into the letterhead. This process can be done manually if you prefer.
GS1.dotm	Toolbar Template This template adds a custom "GS1" toolbar that makes it easy to access the three document templates below. You do not have to install this template to use the three document templates.

Document Templates

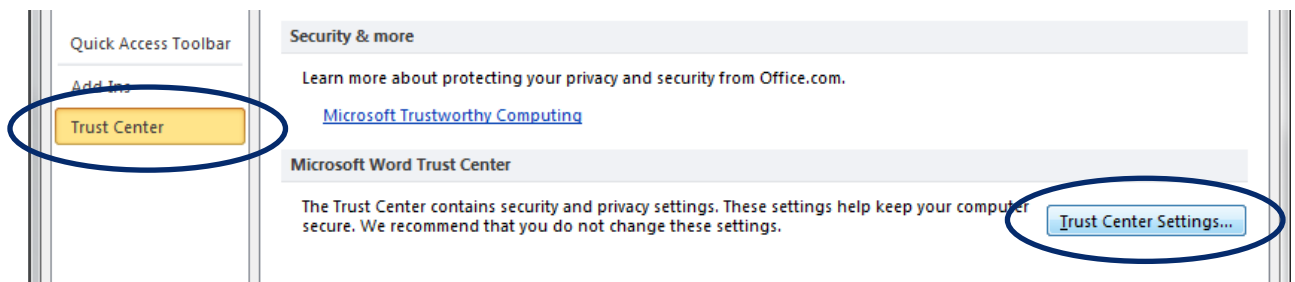

GS1 Letterhead.dotm	Letterhead Document Template This template is for writing correspondence. It features a dialogue box for entering the recipient's and sender's information. The template can either print the letterhead graphics or hide them for use with pre-printed letterhead.
GS1 Basic.dotm	Basic Document Template The basic template is a multi-purpose template for simple documents that do not need a cover page.
GS1 Advanced.dotm	Advanced Document Template The advanced template is for more technical documents that require a cover page. There are three customisable graphic options for the cover page of cross-industry documents and one option for industry documents.

1

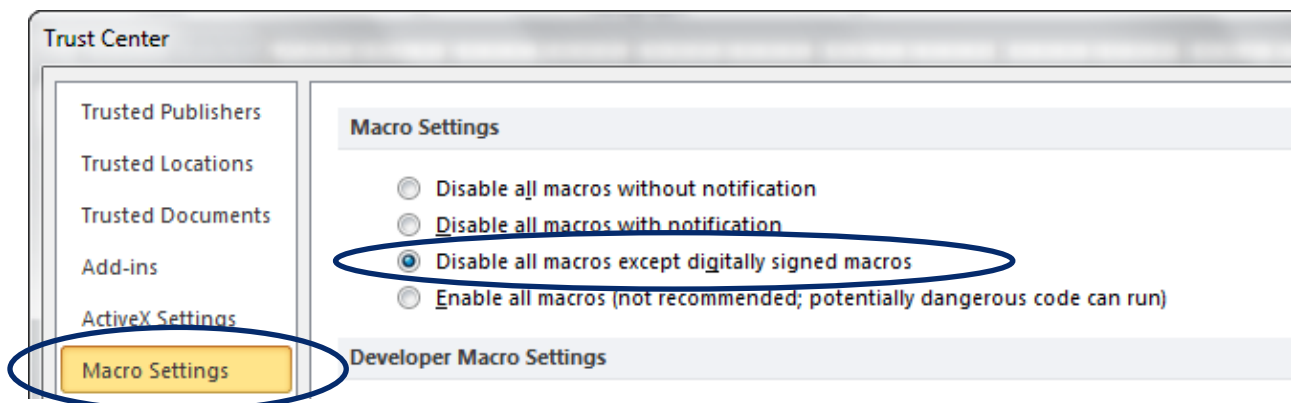

GS1 Microsoft Word Templates Setting Macro Security Levels

The macros that are built into the templates are custom prompts that make the templates easier to use. The templates can be used without them. Follow these steps to enable the macros while reducing the chances of being infected by macro viruses from other sources.

- 1 In Word, click **File, Options** and then select **Trust Center** in the sidebar.
- 2 Click the **Trust Center Settings...** button.

- 3 With the Macro Settings tab selected in the Trust Center sidebar, select **Disable all macros except digitally signed macros**.

- 4 Click **OK**, then click **OK**.
- 5 The first time you access the templates, you will see a Microsoft Word Security Notice: **“The digital signature is valid, but the signature is from a publisher whom you have not yet chosen to trust.”** Click **Trust all from publisher**.

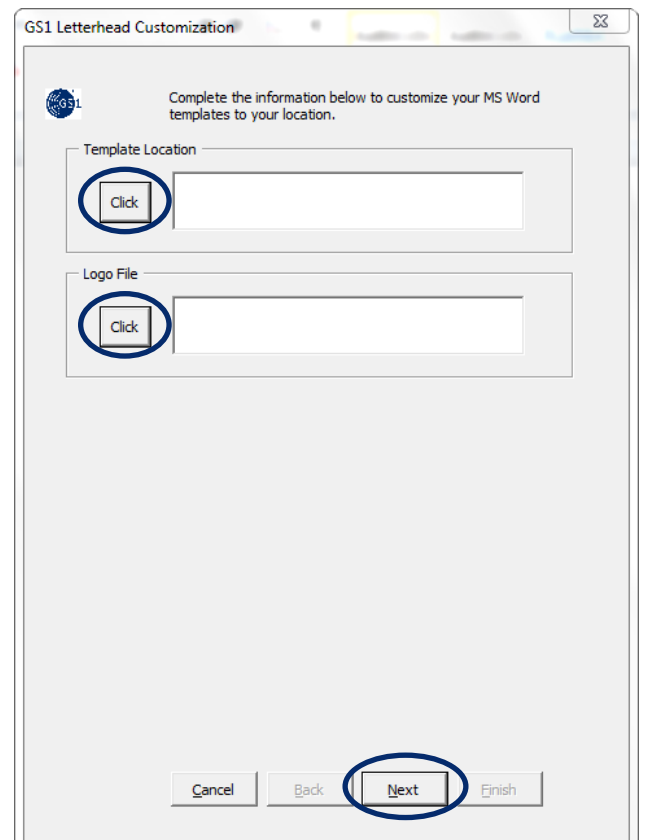

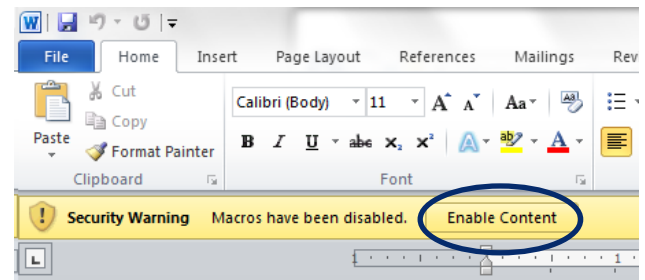

This setting is the same as the **Disable all macros with notification option**, except that if the macro is digitally signed by a trusted publisher, the macro can run if you have already trusted the publisher. If you have not trusted the publisher, you are notified. That way, you can choose to enable those signed macros or trust the publisher. All unsigned macros are disabled without notification.

GS1 Microsoft Word Templates Localising the Templates for Your MO

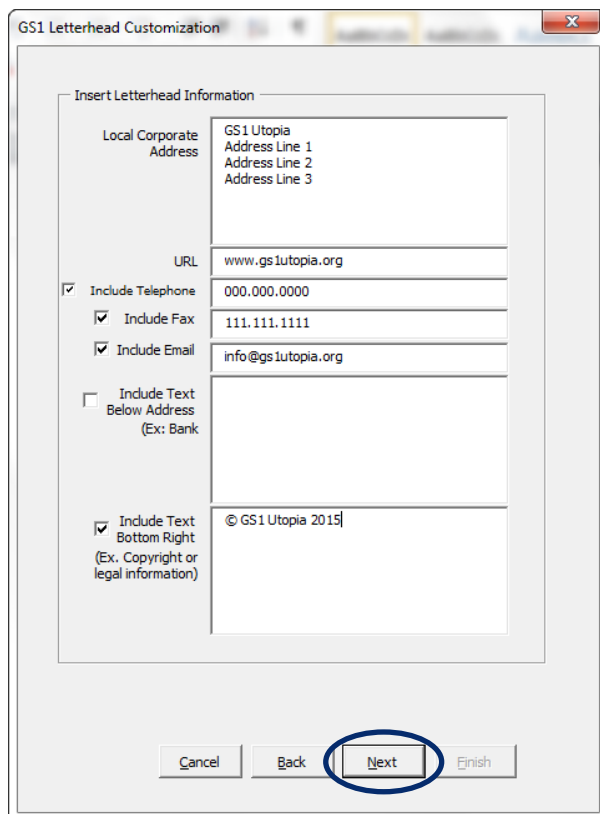

Follow these steps to localise all of the GS1 Microsoft Word Templates. You will be guided to load your country's logo file and fill in local contact information. The localisation template will then update all of your templates automatically.

- 1 Download the GS1 Logos for your MO from <http://mozone.gs1.org/1/brand/logos.html>
- 2 Open the file "GS1 MSWord Localisation.dotm."
You may get a Security Warning (as shown below). If so, click **Enable Content**.
- 3 The GS1 Letterhead Localisation dialogue box will appear. Under Template Location, select the **Click** button.
- 4 Navigate to the location where you want to save the localised versions of the templates, select it and click **OK**. This location will depend on your local IT requirements.
- 5 Under Logo File, select the **Click** button.
- 6 Navigate to the folder containing "GS1_
[Country]_PPT_And_Word_2014-12-17.png," select it and click **OK**. This logo file was sized exactly for the purpose of localising your Word and PPT templates, so it's important to make sure that this particular logo file is used.
- 7 Click **Next** once the Template Location and Logo File have been selected. Error messages will appear if these items are not complete.
- 8 In the next window you will complete your local information, including Local Corporate Address and URL. Other optional information includes telephone number, fax number, email, text that will appear below address and text that will appear in the bottom right (e.g., copyright or legal information).

Continue to complete these steps to localise all of the Microsoft Word templates.

- 9 Uncheck any boxes that you do not want to include. Once all of the desired local information is entered, click **Next**.
- 10 Verify that all of the local information is correct in the preview (shown below). You can use the **Back** button to edit any of the information.
- 11 If necessary, change the preceding characters for telephone, fax or email and click on the **Refresh** button to verify.
- 12 Click **Finish**. The macro will now update your MO's logo and local information on your templates.
- 13 **Close** the blank document.

GS1 Microsoft Word Templates Installing the Templates

These steps are generic guidelines for installing the MS Word templates once they have been localised. Because every MO has different internal technology systems and protocols, the precise processes for installing the templates will vary. Generally speaking, GS1.dotm will be installed in your Startup folder, and the others will be located in a Workgroup templates folder that each MO will individually designate.

- 1 To determine the location of your Word Startup folder, click **File, Options** and the **Advanced** tab in the sidebar of the dialogue box.
- 2 Scroll down and click the **File Locations** button (under the General heading shown right).
- 3 Double-click **Startup** to open the Modify Location dialogue box (or highlight **Startup** and then click the **Modify** button shown below). Note the full location of the Startup folder on your computer.

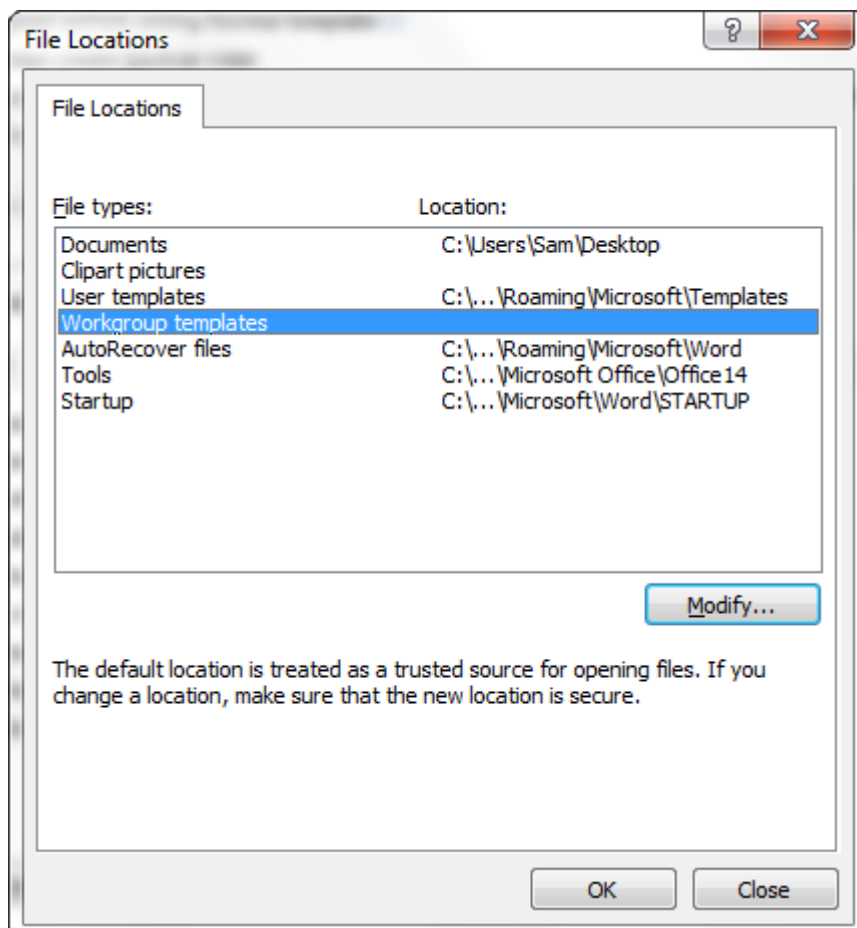

! Some folders may be hidden on your computer. To show all hidden folders, navigate to your **Control Panel**, click **Folder Options** and make sure **Show all folders** is selected. Click **Apply** then **OK**.

Continue to complete these steps to install the Microsoft Word templates.

- 4 Copy the “**GS1.dotm**” file to your Startup folder.
- 5 Repeat steps 1–3 to locate your Workgroup templates folder, but in step 3 double-click **Workgroup templates** (or highlight **Workgroup templates** and click **Modify**) to open the Modify Location dialogue box. Note the full location of the Workgroup templates folder on your computer.

If a Workgroup templates folder does not currently exist, create a folder in the location you wish users to access these templates. This may be on a shared directory or loaded onto each user’s individual computer.
- 6 Copy “**GS1 Letterhead.dotm**,” “**GS1 Basic.dotm**” and “**GS1 Advanced.dotm**” to the existing or newly created Workgroup templates folder.
- 7 Back in Word in the **File Locations** dialogue box, double-click **Workgroup templates** to open the Modify Location dialogue box (or highlight **Workgroup templates** and then click the **Modify** button shown below).
- 8 Navigate to the templates folder, select it and click **OK**.
- 9 Click **OK**, then **OK** again on the last dialogue box. Word will now be able to access the templates.

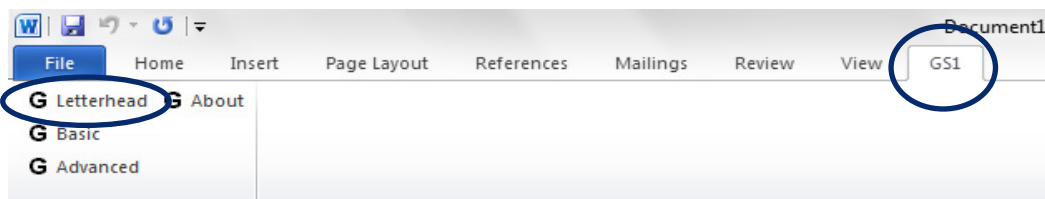

4

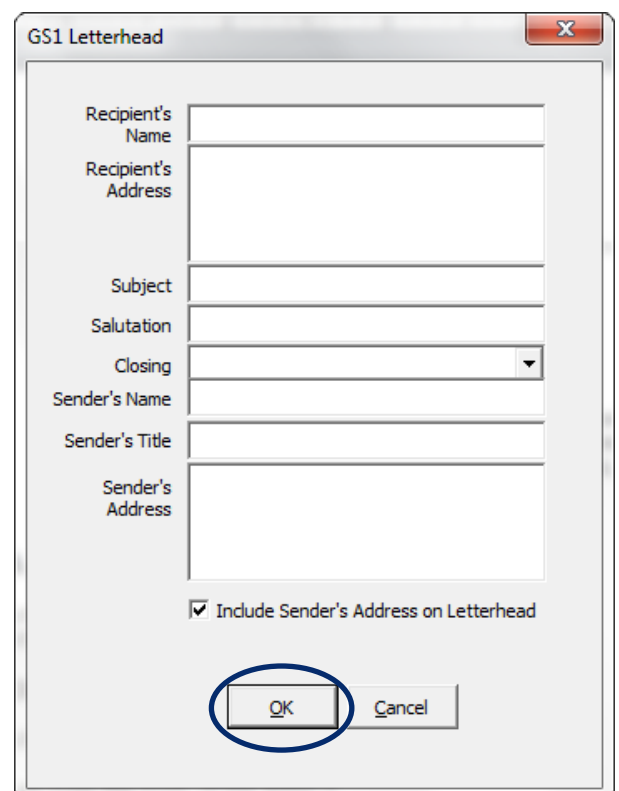

GS1 Microsoft Word Templates Using the Templates

Follow these steps to access your Letterhead, Basic and Advanced templates. If you have opted not to install and use the GS1.dotm toolbar template, disregard these instructions and open a template by selecting File > New > My Templates (will vary by version).

- 1 Open Microsoft Word.
- 2 Select the **GS1** tab in your toolbar.
- 3 Select the template that you want to use. In this instance, click **Letterhead**.

- 4 Your country's customised **Letterhead** template document will open, and the GS1 Letterhead dialogue box will appear.
- 5 Fill in the boxes with the appropriate information. Note that the user can type in their own closing or select from the list.
- 6 To include a sender's address in the top right of the letter that is different from the corporate address already in the template, check the box for **Include Sender's Address on Letterhead**. To not include an additional sender's address, uncheck the box. This information will also be automatically saved.
- 7 Click **OK**. Your information will automatically be inserted into the letter and formatted correctly.
- 8 The **Basic** and **Advanced** templates can also be accessed in the same way.

! This information will be automatically saved for the next time you create a letter.
